

## **Program manager**

### **The Company**

Our client is one of the largest independent vendors of embedded software solutions.

It's technology and services have been chosen by prominent companies in over 50 countries to build their electronic products. The biggest player in automotive software solutions.

Active in European countries, with sales, consultants, engineers, back offices and technical support.

### **The role**

We are looking for a Program Manager.

The role is to lead the tasks of getting agreed statements of work for engineering engagements with your key customers, then, after receipt of order, planning controlling and managing the deliveries against the agreed objectives.

This role will involve interaction across multiple levels of our client organisations, as well as extensive internal interactions.

This is an interesting role, at the forefront of technology solutions with the leading Tier1s and OEMs. It has responsibility, substantial travel (internationally) and the potential to grow into a team leader due to our expansion.

Location is to be discussed. There are several options: one of the existing offices, or renting a serviced office space near the major customers, home office. Whatever works best for the candidate. Part of the work will be done on-site with the customers and regular travel to the Head-office will be required to.

## **Job Qualifications**

University background in Mathematics / Engineering / Electronics

Experienced in Program Management

Experienced in Embedded Software

Experienced and profound understanding of state of the art technology in automotive.

Fluent in English, preferably also in German

## **Job offer**

Very good remuneration

Stock options plan

Company Car

Pension plan

Several insurances
